

11. Create a JavaScript-enabled web page that performs basic arithmetic operations using input from users.

The screenshot shows a code editor interface with a sidebar containing a file tree. The file tree shows a folder named 'B.TECH_G' with several subfolders and files, including 'photo.jpg' and multiple 'Practical_1.html' through 'Practical_10.html' files. The main editor area displays the following CSS code:

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<title>Modern Arithmetic Calculator</title>
<style>
/* ----- BODY ----- */
body {
    margin: 0;
    padding: 0;
    font-family: 'Poppins', sans-serif;
    background: linear-gradient(135deg, #89f7fe, #66a6ff);
    display: flex;
    justify-content: center;
    align-items: center;
    height: 100vh;
}

/* ----- CARD ----- */
.calculator {
    background: #fff;
    padding: 30px 25px;
    width: 360px;
    border-radius: 15px;
    box-shadow: 0 12px 30px #rgba(0,0,0,0.15);
    transition: 0.3s;
}

.calculator:hover {
    transform: translateY(-3px);
    box-shadow: 0 18px 40px #rgba(0,0,0,0.2);
}

```

At the bottom of the editor, status bars indicate 'Ln 162, Col 1', 'Spaces: 4', 'UTF-8', 'CRLF', '(HTML)', 'Port: 5500', and 'Prettier'.

The screenshot shows the continuation of the CSS code from the previous screenshot. The code now includes styles for the title, inputs, and buttons:

```
h2 {
    text-align: center;
    margin-bottom: 25px;
    color: #333;
    letter-spacing: 1px;
}

/* ----- INPUTS ----- */
input[type="number"] {
    width: 100%;
    padding: 12px;
    margin: 10px 0;
    border-radius: 8px;
    border: 1px solid #ccc;
    font-size: 15px;
    transition: 0.3s;
}

input[type="number"]:focus {
    border-color: #66a6ff;
    box-shadow: 0 0 5px #rgba(102,166,255,0.4);
    outline: none;
}

/* ----- BUTTONS ----- */
.btn {
    width: 48%;
    padding: 12px;
    margin: 5px 1%;
```

At the bottom of the editor, status bars indicate 'Ln 162, Col 1', 'Spaces: 4', 'UTF-8', 'CRLF', '(HTML)', 'Port: 5500', and 'Prettier'.

The screenshot shows a code editor interface with a sidebar containing a file tree. The file tree includes a folder named 'B.TECH_G' which contains a subfolder 'Kunal(RU-25-10725)' and several files: photo.jpg, practical_1.html, Practical_2.html, Practical_3.html, Practical_4.html, Practical_5.html, # Practical_6.css, Practical_6.html, # Practical_7.css, # Practical_7.html, # Practical_8.css, Practical_8.html, # Practical_9.css, Practical_9.html, # Practical_10.css, Practical_10.html, and Practical_11.html. The main editor area displays the content of 'Practical_11.html'. The code is as follows:

```
2 <html lang="en">
3   <head>
6     <style>
7       .btn:hover {
8         background: linear-gradient(135deg, #2575fc, #6a11cb);
9         transform: scale(1.05);
10    }
11
12    /* ----- OUTPUT ----- */
13    #output {
14      margin-top: 20px;
15      padding: 12px;
16      background: #f1f1f1;
17      border-radius: 8px;
18      font-size: 16px;
19      color: #333;
20      text-align: center;
21      min-height: 45px;
22      font-weight: bold;
23      transition: 0.3s;
24    }
25
26    #output.show {
27      animation: fadeIn 0.5s ease;
28    }
29
30    @keyframes fadeIn {
31      0% { opacity: 0; transform: translateY(-5px); }
32      100% { opacity: 1; transform: translateY(0); }
33    }
34  </style>
35  </head>
```

At the bottom of the editor, status bars show 'Ln 162, Col 1', 'Spaces: 4', 'UTF-8', 'CRLF', '(d) HTML', 'Port: 5500', and 'Prettier'.

The screenshot shows a code editor interface with a sidebar containing a file tree. The file tree includes a folder named 'B.TECH_G' which contains a subfolder 'Kunal(RU-25-10725)' and several files: photo.jpg, practical_1.html, Practical_2.html, Practical_3.html, Practical_4.html, Practical_5.html, # Practical_6.css, Practical_6.html, # Practical_7.css, # Practical_7.html, # Practical_8.css, Practical_8.html, # Practical_9.css, Practical_9.html, # Practical_10.css, Practical_10.html, and Practical_11.html. The main editor area displays the content of 'Practical_11.html'. The code is as follows:

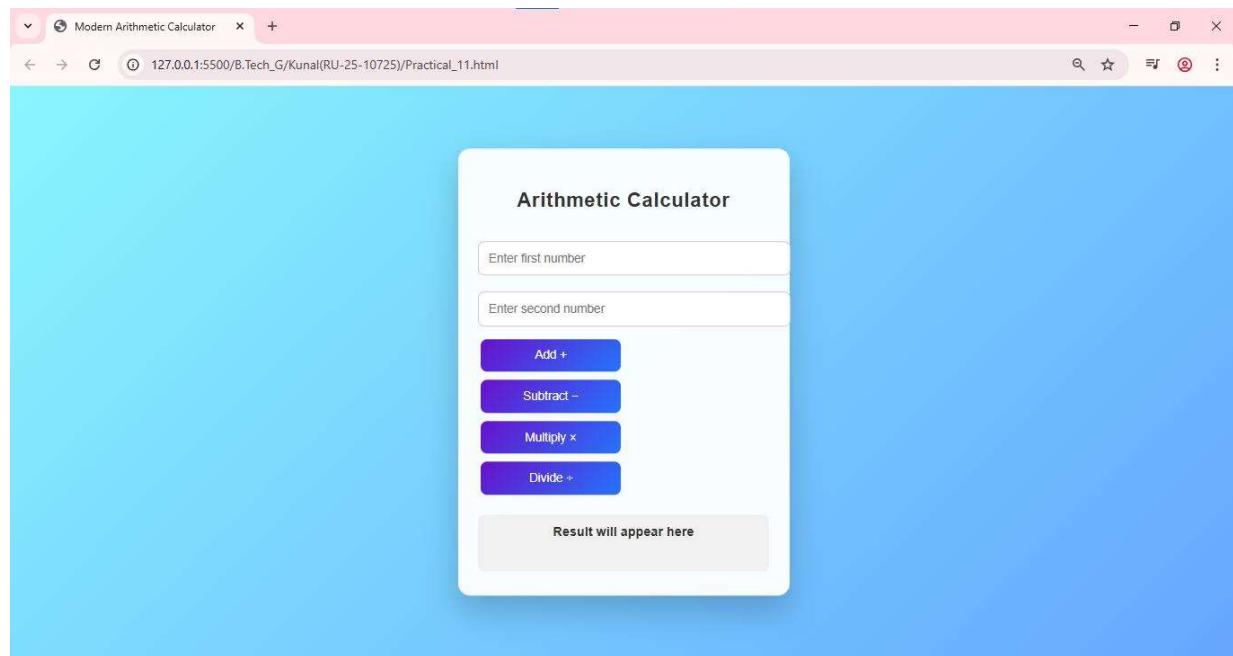

```
2 <html lang="en">
3   <body>
4     <div class="calculator">
5       <h2>Arithmetic Calculator</h2>
6       <input type="number" id="num1" placeholder="Enter first number">
7       <input type="number" id="num2" placeholder="Enter second number">
8
9       <div>
10        <button class="btn" onclick="calculate('add')">Add </button>
11        <button class="btn" onclick="calculate('subtract')">Subtract </button>
12      </div>
13
14      <div>
15        <button class="btn" onclick="calculate('multiply')">Multiply </button>
16        <button class="btn" onclick="calculate('divide')">Divide </button>
17      </div>
18
19      <div id="output">Result will appear here</div>
20
21    </script>
22    <function calculate(operation) {
23      const num1 = parseFloat(document.getElementById('num1').value);
24      const num2 = parseFloat(document.getElementById('num2').value);
25      const output = document.getElementById('output');
26
27      if (isNaN(num1) || isNaN(num2)) {
28        alert("Please enter both numbers!");
29        return;
30      }
31
32      let result;
```

At the bottom of the editor, status bars show 'Ln 162, Col 1', 'Spaces: 4', 'UTF-8', 'CRLF', '(d) HTML', 'Port: 5500', and 'Prettier'.

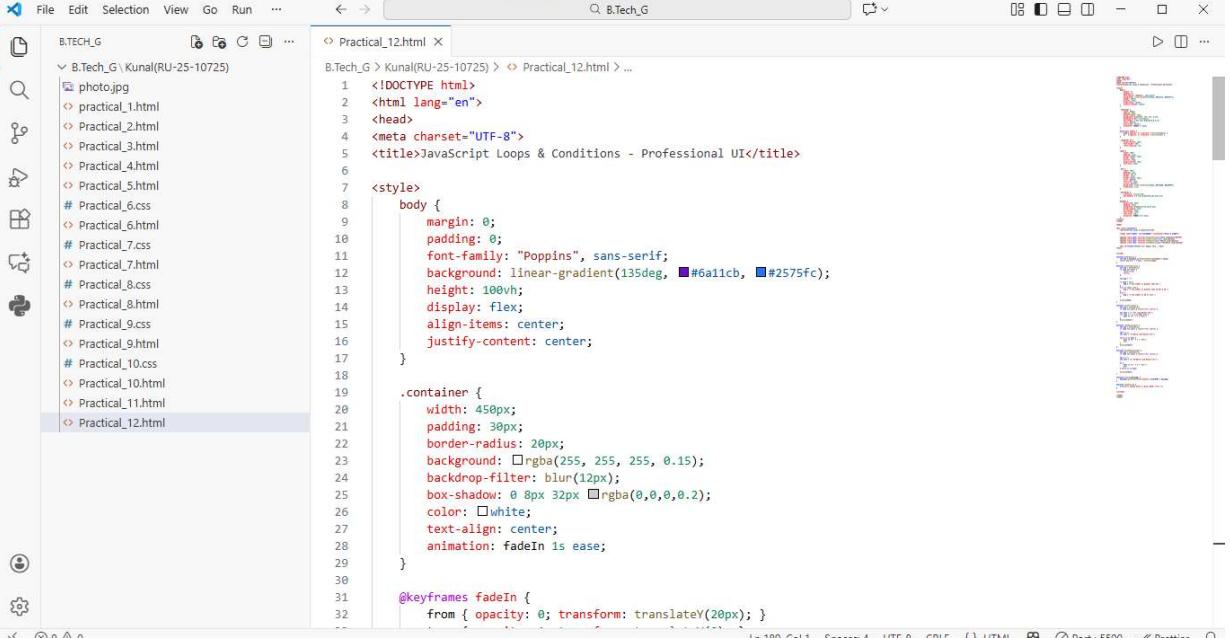

The screenshot shows a code editor interface with the following details:

- File Explorer:** On the left, it shows a folder structure for "B.TECH_G\Kunal(RU-25-10725)" containing files like photo.jpg, practical_1.html, practical_2.html, practical_3.html, practical_4.html, practical_5.html, practical_6.css, practical_6.html, practical_7.css, practical_7.html, practical_8.css, practical_8.html, practical_9.css, practical_9.html, practical_10.css, practical_10.html, and practical_11.html.
- Code Editor:** The main area displays the content of "Practical_11.html".

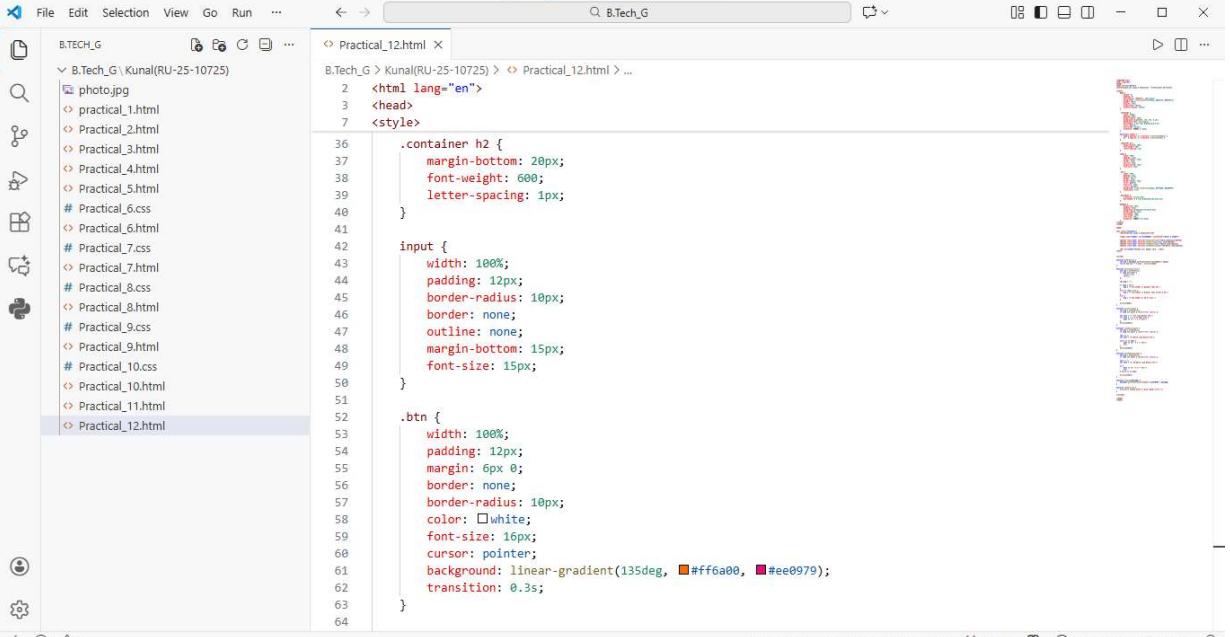

```
2 <html lang="en">
102 <body>
121 <script>
122     function calculate(operation) {
134         switch(operation) {
135             case 'add':
136                 result = num1 + num2;
137                 break;
138             case 'subtract':
139                 result = num1 - num2;
140                 break;
141             case 'multiply':
142                 result = num1 * num2;
143                 break;
144             case 'divide':
145                 if(num2 === 0){
146                     alert("✖ Division by zero is not allowed!");
147                     return;
148                 }
149                 result = num1 / num2;
150                 break;
151             }
152         output.textContent = `Result: ${result}`;
153         output.classList.remove('show');
154         void output.offsetWidth; // Trigger reflow
155         output.classList.add('show');
156     }
157 </script>
158
159
160 </body>
161 </html>
```
- Status Bar:** At the bottom, it shows "Ln 162, Col 1" and other settings like "Spaces: 4", "UTF-8", "CRLF", "HTML", "Port: 5500", and "Prettier".

12. Write JavaScript to demonstrate conditional statements and looping (for, while, do...while).

```

Hello, User! Welcome to JavaScript.

14. Handle HTML form validation using JavaScript events like onsubmit, oninput, and use alert() for feedback.
